LIST OF FIGURES

1	Conceptual Drawing	8
---	------------------------------	---

1 PRODUCT CONCEPT

ByteBuddi is a web-based system designed to help college students and entry-level job seekers efficiently create professional resumes tailored for internships or early-career positions. The system allows users to register for an account, input their personal, educational, and skill-related information, and automatically generate resumes using customization templates.

1.1 PURPOSE AND USE

The product will streamline the resume creation process by offering built-in templates, resume editing features, and preview/export options (PDF). It also includes advanced features such as AI-assisted mock interviews and integration with external platforms like Handshake to enhance career readiness and job application efficiency.

1.2 INTENDED AUDIENCE

ByteBuddi is intended primarily for college students and recent graduates seeking internship or entry-level job opportunities. Secondary audiences include career center administrators who manage resume templates and analyze platform usage. If released publicly, the product could also benefit university career services or educational institutions looking to provide resume-building tools for students.

Figure 1: Conceptual Drawing

2 PRODUCT DESCRIPTION

ByteBuddi offers a comprehensive set of features designed to streamline the resume creation process. It includes secure user account management, intuitive forms for entering experience and skills, and a variety of customized resume templates. Users can preview and export their resumes in real-time, update their information as needed, and participate in AI-powered mock interviews tailored to their preferences. Administrators benefit from a robust dashboard to manage users and templates, while the platform also integrates seamlessly with third-party internship systems such as Handshake.

2.1 FEATURES & FUNCTIONS

ByteBuddi includes the following primary features:

- **User Account Management:** Secure user registration, login, and logout functionality using encrypted credentials.
- **Input of experience and skills:** Forms for users to input academic background, work experience, projects, and skills.
- **Resume Templates:** Multiple internship/entry-level resume templates available for selection and customization.
- **Resume Preview and Export:** Real-time preview of resume and export in PDF format.
- **Resume Editing:** Ability to update and modify previously entered data.
- **Mock Interviews (AI-powered):** Customized interactive practice interviews based on user preferences and internship interests.
- **Admin Dashboard:** Tools for administrators to manage users, templates, and view usage analytics.
- **Platform Integration:** Export and link resumes to platforms such as Handshake or other third-party internship systems.

2.2 EXTERNAL INPUTS & OUTPUTS

Table 2 describes the critical external data flows for the product, detailing the specific data elements received from end users or external systems (inputs) and the outputs generated by the system for user or external consumption. It specifies each data element's name, description, and intended use of each data element to clarify how information enters and leaves the system.

Data Element	Description	Use
User Credentials	Email, username, and password provided by the user during registration/login.	Authenticate user access securely.
Resume Data	User's name, education, experience, skills, and contact information.	Stored in database; used to populate templates.
Template Selection	Choice of resume template (1 of 3+ options).	Determines formatting for generated resume.
Resume Preview	Formatted resume preview generated by the system.	Allows user to review before download/export.
Resume File (PDF)	Exported file produced from user input.	Used by the user for job or internship applications.
Admin Analytics Data	Usage statistics (active users, resumes generated).	Used by admin to monitor and improve the platform.

Table 2: External Inputs and Outputs

2.3 PRODUCT INTERFACES

ByteBuddi features a user-friendly web interface that is accessible from both desktop and mobile browsers. Key screens include:

- Login/Registration Page: Basic authentication and password recovery options.
- Resume Builder Page: Form-based data entry for education, experience, and skills.
- Template Selection Page: Displays available templates with thumbnail previews.
- Resume Preview Page: Real-time rendering of resume data.
- Mock Interview Page: Interactive chat or Q/A session with AI responses.
- Admin Dashboard: Web console for template management and data analytics.

3 CUSTOMER REQUIREMENTS

Customer requirements are the required features and functions specified for the intended audience of this product. This section defines the expected behavior, user visible features, and overall look and feel of the system. Each requirement is tied to a customer need and must not be changed without agreement from the customer, user group, or sponsor. Customer requirements focus on directly observable features and functions encountered by users.

3.1 REQUIREMENT 1: USER ACCOUNT MANAGEMENT

3.1.1 DESCRIPTION

The system shall allow users to create an account, log in securely, and log out. The system shall use a trusted authentication provider to handle password storage and credential verification. The system shall store only minimal user profile data needed for application functionality.

3.1.2 SOURCE

Project specification and team consensus.

3.1.3 CONSTRAINTS

The system must comply with FERPA and university privacy guidelines. The system shall store only minimal student data and shall not store user passwords in the application database.

3.1.4 STANDARDS

All authentication and data traffic shall be protected using TLS 1.3. The design shall follow OWASP guidance for secure authentication and session management.

3.1.5 PRIORITY

Critical

3.2 REQUIREMENT 2: RESUME DATA INPUT

3.2.1 DESCRIPTION

Users shall be able to input personal, educational, and professional information through guided form interfaces with validation. The system shall provide clear error messages for invalid or missing fields.

3.2.2 SOURCE

Customer need for structured resume generation.

3.2.3 CONSTRAINTS

Input forms shall be intuitive and usable on common screen sizes. The system shall prevent submission of incomplete required fields.

3.2.4 STANDARDS

The implementation shall use HTML5 form validation patterns when applicable and shall follow WCAG 2.1 accessibility guidelines.

3.2.5 PRIORITY

Critical

3.3 REQUIREMENT 3: TEMPLATE SELECTION

3.3.1 DESCRIPTION

The system shall provide at least three pre designed resume templates optimized for internship and entry level positions. Users shall be able to switch templates without losing their stored resume content.

3.3.2 SOURCE

Career services team feedback.

3.3.3 CONSTRAINTS

Templates shall follow standard resume formatting expectations and should remain readable when printed.

3.3.4 STANDARDS

Templates shall support both US Letter and A4 page formats.

3.3.5 PRIORITY

Critical

3.4 REQUIREMENT 4: RESUME PREVIEW AND EXPORT

3.4.1 DESCRIPTION

Users shall be able to preview their resume in real time and export it as a PDF using their selected template.

3.4.2 SOURCE

Customer usability expectations.

3.4.3 CONSTRAINTS

Exported PDF files shall be under 5 MB. The exported formatting shall match the preview as closely as possible.

3.4.4 STANDARDS

Exported files shall conform to PDF 1.7.

3.4.5 PRIORITY

Critical

3.5 REQUIREMENT 5: RESUME EDITING

3.5.1 DESCRIPTION

Users shall be able to revisit, edit, and update previously saved resumes. The system shall preserve changes and reflect updates in preview and export outputs.

3.5.2 SOURCE

User feedback and usability requirements.

3.5.3 CONSTRAINTS

Only authenticated users shall be able to modify their saved resume data. Users shall not be able to modify other users data.

3.5.4 STANDARDS

Resume data operations shall follow standard create, read, update, and delete behavior. If an API is used, endpoints should follow REST conventions.

3.5.5 PRIORITY

Critical

3.6 REQUIREMENT 6: AI MOCK INTERVIEW

3.6.1 DESCRIPTION

The system shall offer an AI powered mock interview feature that generates internship related questions and provides basic feedback based on user selected preferences.

3.6.2 SOURCE

Sponsor request for enhanced student preparation tools.

3.6.3 CONSTRAINTS

AI interactions shall avoid collecting sensitive personal data. User submitted content shall be limited to career relevant information.

3.6.4 STANDARDS

The implementation shall follow the AI provider usage policies and the project ethical AI guidelines for safe and responsible behavior.

3.6.5 PRIORITY

High

3.7 REQUIREMENT 7: ADMIN DASHBOARD

3.7.1 DESCRIPTION

Admins shall be able to access a dashboard to manage user accounts, manage resume templates, and view usage analytics.

3.7.2 SOURCE

Administrator use case.

3.7.3 CONSTRAINTS

Admin features shall be protected using role based access control. Only authorized admin accounts shall access admin functions.

3.7.4 STANDARDS

The system shall implement RBAC using a least privilege approach.

3.7.5 PRIORITY

Medium

3.8 REQUIREMENT 8: HANDSHAKE INTEGRATION

3.8.1 DESCRIPTION

The system shall allow users to export resume content in a format that can be uploaded to the Handshake platform. If Handshake provides an API that supports it, the system may support direct linking or transfer.

3.8.2 SOURCE

Customer need for career platform compatibility.

3.8.3 CONSTRAINTS

Integration is dependent on Handshake API availability and terms. If a full integration is not available, the system shall still support export to PDF.

3.8.4 STANDARDS

Any integration communication shall use RESTful API principles and JSON formatted payloads when applicable.

3.8.5 PRIORITY

Medium

3.9 REQUIREMENT 9: QA AND ONBOARDING

3.9.1 DESCRIPTION

The system shall include onboarding guidance, a short FAQ, and help documentation to assist new users. Help content shall be easy to find from the main navigation.

3.9.2 SOURCE

Internal usability testing.

3.9.3 CONSTRAINTS

Content shall be concise and accessible. Onboarding shall not block core functionality after the first use.

3.9.4 STANDARDS

Help and onboarding content shall meet WCAG 2.1 AA accessibility expectations.

3.9.5 PRIORITY

Medium

4 PACKAGING REQUIREMENTS

ByteBuddi is developed as a web application and does not require physical hardware packaging or local software installation. Packaging requirements focus on browser compatibility, guided setup, and generating resumes as properly formatted downloadable files.

4.1 MULTI BROWSER SUPPORT

4.1.1 DESCRIPTION

The system shall display and behave consistently across modern browsers. Core features such as account login, resume editing, preview, and export shall work on supported browsers.

4.1.2 SOURCE

Stakeholder.

4.1.3 CONSTRAINTS

The interface may be simplified on smaller screens, but core resume creation and export features shall remain available.

4.1.4 STANDARDS

The system shall support current stable versions of Chrome, Firefox, Edge, and Safari. Layout and styling shall remain consistent across supported browsers. Interactive features shall behave consistently across supported browsers.

4.1.5 PRIORITY

Medium

4.2 GUIDED USER SETUP

4.2.1 DESCRIPTION

The system shall provide guided onboarding that explains how to create an account, enter resume information, select a template, and export a PDF.

4.2.2 SOURCE

Stakeholder.

4.2.3 CONSTRAINTS

Instructions shall be short, clear, and easy to follow for first time users. Users shall be able to skip onboarding and access it later from a help area.

4.2.4 STANDARDS

Onboarding content shall include step by step guidance for account creation, resume creation, template selection, editing, and exporting. Help content shall meet accessibility expectations.

4.2.5 PRIORITY

High

4.3 RESUME PACKAGING

4.3.1 DESCRIPTION

The system shall package resumes into a professional format suitable for internships and entry level applications. Users shall be able to download the resume as a PDF using the selected template.

4.3.2 SOURCE

Stakeholder.

4.3.3 CONSTRAINTS

Templates shall handle all supported user input fields without breaking layout. Exported resumes shall maintain consistent spacing, alignment, and section ordering.

4.3.4 STANDARDS

The system shall collect resume details such as name, contact info, education, experience, projects, and skills. The system shall format the resume based on selected templates. The preview shall update as users edit content. The system shall provide multiple templates with different visual styles. The system shall support PDF downloads for generated resumes.

4.3.5 PRIORITY

High

5 PERFORMANCE REQUIREMENTS

ByteBuddi will run as efficiently as the connection to the server host and database framework. Storage of customer information, retrieval of necessary data, and updated resume edits are key to our project.

5.1 INFORMATION COLLECTION

5.1.1 DESCRIPTION

Customer information collected will be stored quickly and safely into Firebase

5.1.2 SOURCE

Stakeholder

5.1.3 CONSTRAINTS

Firebase operation and connection

5.1.4 STANDARDS

- Secure connection to Firebase
- Successful data entry into Firebase

5.1.5 PRIORITY

High

5.2 INFORMATION RETRIEVAL

5.2.1 DESCRIPTION

Data retrieval from Firebase should be quick and accurate

5.2.2 SOURCE

Stakeholder

5.2.3 CONSTRAINTS

Firebase operation and connection

5.2.4 STANDARDS

- Secure connection to Firebase
- Accurate retrieval of required data

5.2.5 PRIORITY

High

5.3 RESUME EDITING

5.3.1 DESCRIPTION

Resume editing should be seamless and provide immediate results to user

5.3.2 SOURCE

Stakeholder

5.3.3 CONSTRAINTS

Web server connection

5.3.4 STANDARDS

- Gather input for resume from customer
- Properly layout info
- Provide instant resume appearance to customer

5.3.5 PRIORITY

High

6 SAFETY REQUIREMENTS

This section outlines the Safety Requirements associated with ByteBuddi. The design involves the handling of user data, artificial intelligence, and Firebase operations. The primary safety considerations are mainly focused on the reliability of the system, data privacy, and ethical AI interactions. This helps in ensuring there are no software errors or failures that will compromise the user or their data. It will ensure that all personal information is protected. Lastly, AI-driven responses will remain unbiased and professional. With these safety measures, we will establish a safe and secure environment for the user.

6.1 ERROR HANDLING & SYSTEM SECURITY

6.1.1 DESCRIPTION

The overall system must be protected from security threats such as data corruption, and unauthorized access. With proper input validation and exception handling mechanisms, the system will help stabilize it when it encounters unexpected user inputs or network errors.

6.1.2 SOURCE

OWASP recommendations.

6.1.3 CONSTRAINTS

The system will log out inactive users after a period of time, this creates error logs excluding sensitive data.

6.1.4 STANDARDS

OWASP (ASVS) Application Security Verification Standard.

6.1.5 PRIORITY

High

6.2 DATA PRIVACY & PROTECTION

6.2.1 DESCRIPTION

All user data including personal details, resume information, chat history with AI, all must be securely stored and managed. Using Firebase Authentication, the data transmission between the user and the Firebase backend will be encrypted automatically. Using the Transport Layer Security which ensures end-to-end protection. With the Firebase we can also enforce read and write permissions, which helps prevent any unauthorized access to personal data.

6.2.2 SOURCE

Firebase Security.

6.2.3 CONSTRAINTS

User authentication is required before accessing or modifying personal data. Database rules must be reviewed and tested over time to ensure it meets the standards with privacy and security standards.

6.2.4 STANDARDS

OWASP & Firebase

6.2.5 PRIORITY

Critical

6.3 AI INTERACTION SAFETY & ETHICAL COMPLIANCE

6.3.1 DESCRIPTION

The AI module in the chat box must maintain ethical conversational standards and avoid generating anything discriminatory, harmful, or biased responses. We plan to implement safety filters that will detect and mitigate any inappropriate or misleading response.

6.3.2 SOURCE

IEEE 7000-2021 Standard Model Process for Addressing Ethical Concerns during System Design.

6.3.3 CONSTRAINTS

The behavior from the AI model must comply with the ethical guidelines and avoid sensitive topics or engaging in discussions outside of education during the mock interviews.

6.3.4 STANDARDS

IEEE 7000-2021

6.3.5 PRIORITY

Critical

7 MAINTENANCE & SUPPORT REQUIREMENTS

ByteBuddi will require structured maintenance and support to ensure stability, bug fixes, and ongoing usability after initial deployment. The focus is on ensuring that future teams or admins can reliably maintain the system, correct errors, and extend functionality without requiring a full rebuild.

7.1 ONGOING SYSTEM MAINTENANCE

7.1.1 DESCRIPTION

The source code, technical documentation, and database schemas will be maintained on GitHub with version control. A developer familiar with React, FastAPI, and Firebase should be able to correct issues or extend features.

7.1.2 SOURCE

Team 3 internal plan, Sprint 2 discussions.

7.1.3 CONSTRAINTS

Maintenance requires internet access and proper Firebase credentials; updates must not break the resume export features already in use.

7.1.4 STANDARDS

Follow Git branching standards, semantic versioning, and OWASP security updates.

7.1.5 PRIORITY

High

7.2 USER SUPPORT

7.2.1 DESCRIPTION

ByteBuddi will provide resources to help students troubleshoot common issues and learn how to use the system. This includes a simple FAQ, step-by-step guides, and a contact channel for reporting bugs or problems.

7.2.2 SOURCE

Identified from student usability needs and team discussions.

7.2.3 CONSTRAINTS

Support documentation must remain updated with each release and should be accessible directly through the application interface.

7.2.4 STANDARDS

All support materials must follow WCAG 2.1 accessibility guidelines to ensure they can be used by all students.

7.2.5 PRIORITY

Medium

8 OTHER REQUIREMENTS

In addition to the main functional requirements, ByteBuddi must also meet several non-functional needs to ensure stability, adaptability, and usability. These requirements focus on portability, extensibility, and performance monitoring.

8.1 PORTABILITY

8.1.1 DESCRIPTION

The system must run on Windows, Linux, and Mac OS environments and be fully accessible through modern browsers such as Chrome, Firefox, Edge, and Safari. This ensures that students can access the application regardless of their device.

8.1.2 SOURCE

Team 3 planning and Sprint 2 backlog discussions.

8.1.3 CONSTRAINTS

Deployment requires access to Firebase services and internet connectivity. Local testing requires Node.js and Python environments.

8.1.4 STANDARDS

W3C web standards and browser compliance requirements.

8.1.5 PRIORITY

High

8.2 EXTENSIBILITY

8.2.1 DESCRIPTION

The system must be modular so that additional resume templates, export formats, or third-party integrations can be added in future sprints without rewriting the core codebase.

8.2.2 SOURCE

Anticipated growth of features from backlog and sponsor expectations.

8.2.3 CONSTRAINTS

Code should avoid hardcoding templates or export formats. New modules should connect through APIs or component-based design.

8.2.4 STANDARDS

REST API conventions and modular React component design.

8.2.5 PRIORITY

High

8.3 PERFORMANCE MONITORING

8.3.1 DESCRIPTION

The system should include basic logging for errors and usage metrics. This allows the team to monitor performance, track reliability, and fix recurring issues more efficiently.

8.3.2 SOURCE

Team 3 internal design goals for maintenance and support.

8.3.3 CONSTRAINTS

Logs must not include sensitive personal information from resumes. Monitoring must comply with student data privacy policies.

8.3.4 STANDARDS

Firebase Analytics and JavaScript logging tools.

8.3.5 PRIORITY

Medium

9 FUTURE ITEMS

Some features were considered during planning but were not included in the current sprint scope due to time and resource limits. These items are important for long-term growth of ByteBuddi but are marked as lower priority for now.

9.1 AI-POWERED RESUME FEEDBACK

9.1.1 DESCRIPTION

The system could use AI models (OpenAI/HuggingFace) to analyze resumes and provide suggestions for improving formatting, grammar, and keyword usage for job applications.

9.1.2 SOURCE

Team 3 brainstorming sessions and backlog discussions.

9.1.3 CONSTRAINTS

This feature requires integration with external APIs and additional cost for API usage.

9.1.4 STANDARDS

Natural language processing standards, API integration guidelines.

9.1.5 PRIORITY

Low (Future sprint)

9.2 LINKEDIN AND HANDSHAKE INTEGRATION

9.2.1 DESCRIPTION

Allow users to export their resumes directly to professional platforms such as LinkedIn or Handshake to streamline job applications.

9.2.2 SOURCE

Suggested in Sprint 1 backlog discussions.

9.2.3 CONSTRAINTS

Requires platform-specific APIs and user authentication permissions.

9.2.4 STANDARDS

OAuth2 authentication, LinkedIn and Handshake developer API policies.

9.2.5 PRIORITY

Low (Future sprint)

9.3 INTERVIEW SIMULATION

9.3.1 DESCRIPTION

A mock interview tool could be integrated where users answer questions and receive AI-generated feedback to practice communication skills.

9.3.2 SOURCE

Brainstorming from initial project idea “CSE Clippy.”

9.3.3 CONSTRAINTS

Requires stable AI integration and additional UI/UX design.

9.3.4 STANDARDS

Follow usability guidelines for accessibility and performance.

9.3.5 PRIORITY

Low (Future sprint)
